

OPEN POSITION AT “ENSTA PARISTECH” IN THE FIELD OF MUSICAL ACOUSTICS

BATWOMAN (Basic Acoustics Training - & Workprogram On Methodologies for Acoustics - Network) is the **Initial Training Network (ITN)** No. 605867, funded under the FP7 Marie Curie programme of the EC. **Duration:** Sep. 1, 2013 - Aug. 31, 2017.

BACKGROUND: The BATWOMAN ITN aims at structuring research training in basic and advanced acoustics and setting up a work program on methodologies for acoustics for skills development in a highly diverse research field offering multiple career options.

The consortium consists of renowned public and private partners from musical acoustics, room acoustics and automotive acoustics who will merge their existing knowledge, extend it jointly and complement it with insights of recent sound perception research, (Fig. 1.) This will exploit existing synergies and overcome obvious fragmentation in research, methodology and basic as well as advanced acoustics training.

Providing interdisciplinary training and joining or exchanging methodology in research, is expected to have a strong impact on the skills of trained researchers as far as sound design capabilities, modelling accuracy, efficiency and applicable frequency range is concerned. Adding the understanding of human auditory perception will help to tackle the hard problem of sound quality parameters and to better understand stimulating effects on well-being and cognition of people exposed to sound, but also harmful effects, like annoyance or even deteriorating cognitive performance.

The ITN will provide interdisciplinary and intersectoral research training for excellence. It will structure existing PhD-level training in acoustics setting up European curricula with compatible and recognised courses

offered by Universities and private enterprises. Simultaneously it will push the state of the art in vibro-acoustic modelling and in interdisciplinary design optimisation by initiating a joint research effort increasing critical mass. The complementary structure of the network will make it not to break apart after the ITN project period. It is rather expected that the methodologies used to analyse, design and optimise transport vehicles, rooms and musical instruments will grow together and will be further developed in an interdisciplinary joint effort.

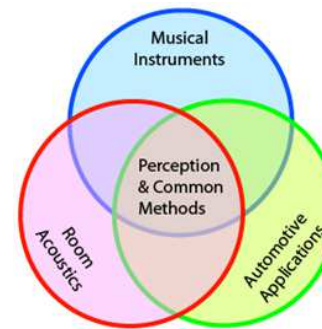

Fig. 1: BATWOMAN R&D scope.

Fig. 2: BATWOMAN consortium.

CONSORTIUM: contains partners (6 universities, 1 research institutes and 4 companies) specialised in three specific application fields of acoustics: Automotive sector, room acoustics and musical instrument acoustics, see Fig. 2. The industrial partners bring in application knowledge and expertise, and the research partners bring in a range of engineering methodologies, the capability of PhD research training, provision of courses and dissemination of results.

BATWOMAN

Basic Acoustics Training - & Workprogram On Methodologies for Acoustics - Network

COORDINATOR: ViF - Kompetenzzentrum - Das virtuelle Fahrzeug Forschungsgesellschaft mbH, <http://www.v2c2.at> in Graz, Austria. GRESIMO Coordinator: **Dr. Michael Nöst**, Michael.Noest@v2c2.at

MARIE CURIE ELIGIBILITY CRITERIA – in short:

- **Experienced Researcher (ER):** researchers having **at least four years of research experience** (full-time equivalent) since gaining a university diploma giving them access to doctoral studies, in the country in which the degree/diploma was obtained OR researchers already in possession of a doctoral degree, regardless of the time taken to acquire it, **AND with a total research experience ≤ 5 years.**

Within BATWOMAN, **ENSTA ParisTech** (<http://ume.ensta-paristech.fr>) is looking for an ER (Duration 18 months) focusing on **“Portability and mutual applications of developed simulation methods”**

Objectives: - Transforming the simulation methods and program codes developed in the network into prototypes and tools applicable by the industry. - Examining whether one method developed in one sector (e.g. the automotive industry) can be used with benefit by another sector (e.g. room acoustics or musical acoustics). - Testing the portability of the method developed in one partner laboratory to another.

Tasks and methodology: - Testing one selected code and rating the steps to transform it into a prototype. - Use a given code (e. g. in musical acoustics) for an application in another sector (e.g. automotive industry) as an example. - List the difficulties and evaluate the feasibility/portability of the code. - Implementing a code developed in one host institution in an secondment institution.

CANDIDATE PROFILE: All candidates must be fluent in spoken and written English. The R&D is highly multidisciplinary. An ideal candidate has an M.Sc. in engineering (e.g. mechanics, materials, electronics, physics) and an adequate mathematical & computational background.

- Specific experience with simulation methodologies and software tools is an advantage.
- Knowledge in acoustics of fluids and structures is highly welcome

- Knowledge of programming languages (C/C++, Fortran, Visual.Basic, ...) and/or knowledge of Matlab are an advantage.
- All members of the network are equal opportunity employers, both female and male candidates are invited to apply.

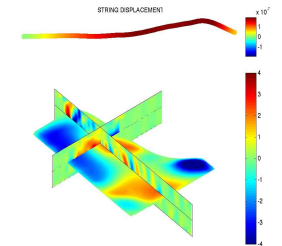

The research activities will mainly be carried out at Partner ENSTA ParisTech located in (Palaiseau, France), possibly combined with research visits and/or short-term secondments to other members of the network.

APPLY NOW! Start date target: **1 January 2015**

APPLICATION: To apply, please send a **detailed CV** together with a **letter of motivation** and **names of reference(s)** to

Prof. Antoine Chaigne
Unit of Mechanical
Engineering (UME)
ENSTA ParisTech
828, bd des Maréchaux
91762 Palaiseau Cedex,
FRANCE

The remuneration will be in line with the EC rules for Marie Curie grant holders and consists of a salary augmented by a net mobility allowance. <http://cordis.europa.eu/fp7>

¹ The research experience includes the period since gaining a university degree giving the candidate access to doctoral studies (the degree must entitle the holder to embark on doctoral studies, without having to acquire any further qualifications) or already in possession of a doctoral degree, independently of the time taken to acquire it. Among others, following criteria apply for eligibility:

- the researcher shall not be a national of the State in which the hosting partner's research team is located
- at the time of appointment, the researcher may not have resided or carried out her/his main activity in the country of the hosting partner for more than 12 months in the 3 years immediately prior to her/his appointment
- women are especially encouraged to apply.
